

air spotweld drill

The Fan WS90 Air Drill features the following:

- **Extreme versatility.**
The WS90 is the most versatile unit for speedy removal of outside and inside spot welds on vehicle bodywork.
- **Infinite variability.**
The tool depth is infinitely variable, preventing penetration of the second panel. The red adjustment wheel selects the setting to limit penetration.
- **Vario Matic, for easy outside spot weld removal.**
The WS90 is converted in one simple action, without additional tools. The Vario Matic is simply fitted and engaged with the ring. According to the requirements the WS90, can be rotated 360°. The safety-fixing system prevents side-slipping of the drill when in action.
- **Optional Jumbo-Matic available.**
To remove spot welds on wide and deep profiles, just use the Jumbo Matic. For safety reasons, it is more common for the outside panels to be spot welded directly to the profiles, for example on door pillars, side panels on commercial vehicles, rear panels, etc. The spot weld diameters are now larger and the distance between them has increased. Also for technical and visual reasons, the spot welds are placed further inside, behind the Z and U profiles. The Jumbo Matic reaches effortlessly around these difficult areas.

Optional
JUMBO - MATIC
for deep profiles

DRILL BITS AVAILABLE

Gold Tipped Drill Bit

HSS High Strength Steel Drill Bit

BTR / BOR Boron Drill Bit

TECHNICAL SPECIFICATIONS

Air Pressure	6 - 8 bar
Weight	1.8 kgs
Idling Speed	1300 rpm
